

Atharva Shinde

AI / GenAI Developer | LLMs | Python | Spring Boot | REST APIs

☎ +91-7840954311 ✉ atharvashinde811@gmail.com 📠 Atharva-Shinde 🌐 atharvashinde57 📍 Pune, India

Professional Summary

Backend developer with hands-on experience building Java/Spring Boot applications and RESTful APIs, now focused on applying that backend foundation to Generative AI and LLM-based systems. Published AI researcher (speech-to-text) with practical exposure to prompt engineering, LLM APIs, RAG pipelines, and embeddings/vector search, alongside strong Python fundamentals, OOP, and DSA. Comfortable integrating AI capabilities into backend services and APIs, evaluating model outputs, and iterating quickly from prototype to working feature. Final-year Computer Engineering graduate with a track record of independently shipping full-stack, production-style projects in Agile team settings.

Experience

Java Backend Developer Intern

December 2025 – June 2026

Software Era Technologies

Pune, Maharashtra

- Work as a Backend Developer Intern building Java-based applications with **Spring Boot** and **RESTful APIs** for scalable, production-ready systems following **OOP** and **Microservices Architecture** principles.
- Use **Hibernate**, **JPA**, **Spring Data JPA**, **JDBC**, **SQL**, and **MongoDB** for efficient data persistence and database operations across relational and NoSQL systems.
- Document and test APIs with **Swagger (OpenAPI)** and **Postman** while collaborating on microservices-based systems within an **Agile** development environment.
- Support deployment, build automation, version control, and logging using **Docker**, **Maven**, **Apache Tomcat**, **Git/GitHub**, **ELK Stack**, and **Log4j** as part of **CI/CD**-oriented delivery.

Projects

DocuMind AI – RAG-based Document Q&A Assistant

[Repo](#) | [Live](#)

Python, LangChain, OpenAI API, FastAPI, Vector DB (FAISS), Spring Boot (backend integration), Docker

- Built a **Retrieval-Augmented Generation (RAG)** pipeline that ingests PDFs/docs, chunks and embeds content, and answers natural-language questions using an **LLM (OpenAI API)**.
- Designed the embedding and semantic search layer with a **vector database (FAISS)** for fast, relevant context retrieval before passing it to the model.
- Exposed the assistant as a **REST API (FastAPI)** and integrated it with a **Spring Boot** backend service, enabling reuse across existing Java applications.
- Iterated on **prompt design and system instructions** to improve answer accuracy, reduce hallucinations, and structure outputs as JSON for downstream consumption.

FraudShield

[Repo](#) | [Live](#)

Java 17, Spring Boot 3, Spring Security, JWT, MySQL, JPA/Hibernate, React, Maven, Docker, Git

- Designed and developed a full-stack financial fraud detection platform using **Spring Boot** and **React** for real-time transaction monitoring and risk assessment.
- Built **RESTful APIs** for users, transactions, fraud alerts, customers, and fraud rules using **Spring Data JPA** and **Hibernate** with **MySQL**.
- Developed a rule-based fraud detection engine applying core **Data Structures & Algorithms** concepts to score transaction risk by amount, location, device, and frequency; secured REST APIs with **Spring Security** and **JWT-based authentication**.
- Built transaction monitoring dashboards with filtering, pagination, and risk analytics; implemented centralized exception handling, DTO-based responses, and containerized deployment (**Docker**).

InsureDocs

[Repo](#) | [Live](#)

Java 17, Spring Boot 3, Spring Security, MongoDB, Thymeleaf, Maven, Docker, Git

- Designed and developed a secure web application using **Spring Boot** for managing insurance policy documents with user authentication.
- Implemented PDF upload and file handling so users can securely store and access insurance documents.

- Integrated **MongoDB** for document metadata and user information with a flexible schema design.
- Secured the application with **Spring Security** using form-based login and BCrypt password encryption.
- Built a dynamic server-side UI with **Thymeleaf**, following **MVC architecture** with Maven-based build automation.

Technical Skills

Languages & Databases: Python, Java, C, C++, SQL, HTML5, CSS3, MySQL, MongoDB, Redis

AI / GenAI: LLMs (OpenAI, Gemini, Claude), Prompt Engineering, RAG, LangChain, Embeddings, Vector Search, Function/Tool Calling, Speech-to-Text, NLP Basics

Frameworks & Libraries: FastAPI, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Java Collections Framework

Tools & Platforms: Git, GitHub, Docker, Maven, Apache Tomcat, Postman, Swagger/OpenAPI, IntelliJ IDEA, VS Code, MySQL Workbench, ELK Stack, Log4j

Core Concepts: OOP, Data Structures & Algorithms (DSA), REST APIs, Microservices Architecture, MVC Architecture, JWT, OAuth2, JDBC, System Design Basics, Design Patterns, JUnit, CI/CD, Agile/Scrum

Education

Bachelor of Technology in Computer Engineering

2022 – 2026

JSPM's Rajarshi Shahu College of Engineering, Tathawade (SPPU)

Pune, Maharashtra

- Cumulative GPA: 8.06 / 10.0 | Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design

Achievements & Certifications

Published Research Paper — AI-powered speech-to-text systems, presented at [ICTIS 2025 \(Springer\)](#).

TCS iON NQT – IT: Score 72.90 (2026)

Certifications: Google AI Essentials (2024) | Google Cybersecurity Program (2023) | IBM Generative AI (2025)
